- Injury-related acute pain
- Chronic pain requiring opioid management

Oxycodone is classified as a **Schedule II controlled substance** due to its potential for dependence and misuse. It can only be legally obtained with a **valid prescription** from a licensed healthcare provider.

Who Can Be Prescribed Oxycodone?

Healthcare providers carefully assess each patient before prescribing Oxycodone. Factors they consider include:

- Pain severity and cause
- Medical history and current medications

- Risk of opioid dependence or abuse

Oxycodone is generally prescribed for **short-term or closely monitored use**, often with a plan for tapering or transitioning to other therapies as needed.
